

## DESCRIPTION

**Dual-Mix Seam Sealer** is a medium viscosity, two-component epoxy sealer for use on interior or exterior seams, joints and voids.

## FEATURES

- **Dual-Mix™** Forever Warranty
- OEM recommended
- Direct to metal
- Paintable immediately\*
- Will not shrink, harden or crack
- Non-sag formula duplicates OEM sealers
- Optimized viscosity for softened or rolled edges
- Fast cure increases production
- Sprayable for additional versatility

## SUITABLE SUBSTRATES

- Bare Metal
- OEM Finish
- Epoxy Primer
- DTM Urethane Primer

## TYPICAL PROPERTIES

Part:	Product Name:	Color:	Container:
39377	Dual-Mix Seam Sealer	Gray	7 oz. Cartridge
39477	Dual-Mix Seam Sealer	Beige	7 oz. Cartridge

<b>Working time:</b>	10 minutes @ 70°F (21°C)
<b>Set time:</b>	15 minutes @ 70°F (21°C)
<b>Top Coat time</b> with most solvent-based coatings:	0 minutes @ 70°F (21°C)
<b>Top Coat time</b> with most waterborne coatings:	15 minutes @ 70°F (21°C)
<b>Cure time:</b>	1 hour @ 70°F (21°C)

Check local VOC regulations to ensure compliance of all products in your area.

Always wear OSHA required (PPE) Personal Protection Equipment as outlined on the SDS and product label to ensure your safety.

## HANDLING AND APPLICATION

### PREPARATION:

**Note:** Prior to applying **Dual-Mix™ Seam Sealer** vehicle temperature should be 70°F (21°C) for at least one hour.

1. Clean joints and seams thoroughly with **SEM Solve** or **XXX Universal Surface Cleaner**.
2. Sand primed surface with P400 grit sandpaper or scuff with a gray scuff pad. Sand bare metal surface with P80 grit sandpaper.
3. Blow off and re-clean with **SEM Solve** or **XXX Universal Surface Cleaner**.
4. Tack clean to remove lint and dust.

**Dual-Mix Seam Sealer** may be applied directly to properly prepped bare metal or primed surfaces. However; if the area will be subjected to any flexing or twisting, including certain vehicle manufacturer's roof skins, prime the area first with a quality, two-component urethane or epoxy primer such as **World Class™ DTM Primer** before applying **Dual-Mix Seam Sealer**. If in doubt, prime. Allow primer to fully cure before applying **Dual-Mix Seam Sealer**.

**Note:** **Dual-Mix Seam Sealer** should not be used directly over acid based self-etching primers or vice versa. This application procedure can cause cracking and blistering of the undercoat and top coat.

**Dual-Mix Seam Sealer** is paintable immediately with most solvent-based coatings, however, always test for compatibility.

### MIXING:

Place cartridge into the **Universal Manual Applicator** or **Universal Pneumatic Applicator**. To remove cap, insert flat head screwdriver into slot and pry upward.

**Note:** Prior to installing **Static Mixer**, equalize cartridge by dispensing product until both parts flow equally. Install **Static Mixer**. Cut tip to desired application size. Hold applicator upright until product is dispensed into mixer. Dispense a test bead to ensure proper mix. For cap replacement, match circles and squares, then snap back into place.

### STATIC MIXERS:

Part:	Product Name:	For:	Container:
70011	Integral Nut Square Static Mixers	7 oz. cartridge	6 pack
70012	Integral Nut Square Static Mixers	7 oz. cartridge	50 pack

### APPLICATION:

1. Apply **Dual-Mix Seam Sealer** into joint or seam. Work in or finish with gloved finger, putty knife or spreader.
2. While product is still wet, remove excess by wiping with a small amount of solvent compliant with the VOC regulations in your area.
3. **Dual-Mix Seam Sealer** can be painted immediately with most solvent-based coatings, or up to 24 hours without scuffing. If in doubt, scuff with a gray pad prior to painting.

Check local VOC regulations to ensure compliance of all products in your area.

---

## SPRAYING:

The **Quick Spray System** easily attaches to the **Universal Pneumatic Applicator** and allows users to duplicate OEM seam sealer textures while utilizing the two-component technology of **SEM** seam sealers.

**Versa-Tips** snap onto the end of the **Static Mixer** and allow the user to easily duplicate OEM seam sealer ribbons. **Versa-Tips** contain six tips that may be cut to 0.5", 0.75", 1", 1.25" and 1.5" ribbon tip.

## DUPLICATING SOFTENED OR ROLLED EDGES:

**Dual-Mix Seam Sealer** can be used to duplicate the OEM rolled or softened edge sometimes seen on door skins and other seams of a vehicle. Product and vehicle temperature must be at room temperature prior to application.

Use masking tape to tape off the desired channel width prior to dispensing Dual-Mix Seam Sealer. pull tape away from the seam at a 45 – 90° angle immediately after dispensing to allow seam sealer to roll or soften the edge.

**Note:** Angle and direction of masking tape pull will provide varying edges. Pulling away from the seam sealer produces a rolled or softened edge, while pulling toward the seamer creates a beveled edge. Pull tape directly back onto itself creates a squared edge. (See images below.)

45° Pull Away

45° Pull Towards

Pull Onto Itself

Rolled or softened
